ABSTRACTED-PUB-NO: EP 57611A

BASIC-ABSTRACT:

Spray-dried particles consist mainly of H<sub>2</sub>O-soluble soap particles (I); have average dia. 300-700 microns; and are coated with an inorganic substance (II). (II) is H<sub>2</sub>O-soluble; and at least 80% by wt. of its particles have average dia. less than 100 microns.

(I) pref. have average dia. 500-600 microns, and the ratio (I) particle dia.: (II) particle dia. is 6-8:1, pref. 7:1. (I) particles contain 51-100% pref. 60-80% by wt. soap (pref. from coconut oil and tallow, or from an unsatd. fatty acid (at least 16C; pref. at least 25% by wt. of (I) particle)); up to 15% by wt. of anionic surfactants (Na alkylbenzene sulphonate etc.); and up to 30% by wt. nonionic surfactants (pref. 7-25C prim. alcohols ethoxylated with 5-30 mol. of ethylene oxide). (II) (pref. 3-25% by wt. of total compsn.) is pref. an H<sub>2</sub>O-soluble phosphate, carbonate, borate, sulphate, or metasilicate salt (esp. Na or K) opt. mixed with an organic cpd. (pref. Na nitrolotriacetate or tetraacetyl-ethylenediamine).

ABSTRACTED-PUB-NO: US 4103068A

## BASIC-ABSTRACT:

A yarn of PET filaments is treated with 0.3-0.6 wt. % of a first finish then 0.7-1.2 wt. % of a second finish. The first finish comprises 10-20 wt. % refined coconut oil, 10-20 wt. % 14-15C branched chain alcohol stearate, 3-6 wt. % ethoxylated tallow amine, 10-20 wt. % ethoxylated lauryl alcohol, 8-12 wt. % sodium alkylaryl sulphonate, 1-3 wt. % dinonyl sodium sulphosuccinate and 35-50 wt. % white mineral oil of b. pt. 510-620 degrees F. At least 0.15 wt. % first finish is retained on the yarn.

The second finish comprises 13-25 wt. % glycerol monooleate or decaglycero l tetraoleate with ethoxylated tall oil fatty acids, 12-20 wt. % sulphated glycerol trioleate or ethoxylated tallow amine and 55-75 wt. % 14-15C branched chain alcohol stearate.

The finished yarn does not yellow on exposure to light. When used in tyres, extra high-speed endurance is provided.

ABSTRACTED-PUB-NO: US 3962516A

## BASIC-ABSTRACT:

Synthetic yarns are composed of polyethylene terephthalate filaments treated with (on wt. of yarn) 0.3-0.6 wt.% of a liq. compsn. comprising 10-20 wt.% each of hexadecyl stearate and refined coconut oil, 3-6 wt.% ethoxylated tallow amine, 10-20 wt.% ethoxylated lauryl alcohol, 8-12 wt.% Na alkylaryl sulphonate, 1-3 wt.% dinonyl Na sulphosuccinate, 1-3 wt.% 4, 4'-thio-bis (3-methyl-6-tert.butylphenol) and 35-50 wt.% white mineral oil b.pt. 510-620 degrees F so that 0.15-0.30 wt.% is retained in the yarn, and the yarn is treated with 0.5-1.5 wt.% (on yarn) of a polyalkylene glycol finish (I) consisting essentially of a polyoxyethylated-polyoxypropylated monoether condensn. prod. of 40-60 mol. % ethylene oxide and 40-60 mol. % propylene oxide with a 3-5C alcohol, with a mol.wt. of 300-600 and a viscosity of 75-300 S.U.S. at 100 degrees F. The treatment is esp. useful for producing tyre yarns with improved compression-extension durability in rubber. The finishing agent (I) has the formula R-(O-R1-O-R2)n-OH where R1 and R2 = Et, Me, etc. R = 1-8C alkyl and n is such that the mol. wt. is  $\geq 300$ . Pref. after the treatment the yarn is heated for 10-160 sec. at 215-230 degrees C. In a further embodiment, the finish (I) is applied without the prior oil treatment.

## BASIC-ABSTRACT:

The frozen dessert compsn. comprises: (a) 2-7% protein solids esp. non-fat milk solids, (b) 5-25% edible triglyceride e.g., cottonseed-, soybean-, corn-, sunflower-, palm-, palm kernel-, peanut-, rice-, safflower-, or coconut oil, (c) 0.2-2% first emulsifier selected from edible polyglycerol fatty acid esters contg. 2-10 (pref. 2-3) glycerol units and 1-3 (pref.) 14-18C fatty acid gps. per glycerol moiety, or sorbitan fatty acid esters contg. 1-3 (pref.) 14-18C fatty acid gp. per sorbitan moiety, (d) 0.5-15wt. % with respect to first emulsifier, of a second emulsifier which is an edible anionic surfactant, e.g., alkali(ne earth) salts of fatty carboxylates, sulphates, sulphonates, fatty acid lactylates and half salts of dicarboxylic acid esters of 8-20C; (e) 10-40wt. % saccharides, pref. dextrose, sucrose, leavulose, matlose, corn syrup or mixts. thereof; (f) 45-65% water. Flavours, colouring agents and stabilisers are included.

ABSTRACTED-PUB-NO: US 3940544A

BASIC-ABSTRACT:

A yarn consisting of polyethylene terephthalate (I) filaments with COOH end gp. content <25 meq/kg is treated (A) with 0.3-0.6% wt. % (on the yarn) of a liquid finish compsn. comprising 10-20 wt. % hexadecyl stearate; 10-20 wt. % refined coconut oil; 3-6 wt. % ethoxylated tallow amine, 10-20 wt. % ethoxylated lauryl alcohol; 8-12 wt. % Na alkaryl sulphonate, 1-3 wt. % dinonyl Na sulphosuccinate; 1-3 wt. % 4,4'-thio-bis(3-methyl-6-t-butylphenol); 35-50 wt. % mineral oil of b.pt. 510-620 degrees F and 0.15-0.3% of this finish is retained; then (B) with 0.5-1.5% (on the yarn) a finish compsn. comprising a polyalkylene glycol deriv. (II) of formula R(OR1OR2)NOH (R1 and R2 = 1-5C alkylene; R = 1-8C alkyl; n gives mol. wt. 300-600), plus 5-35 wt. % on (II) of a triazine triol of formula (III) (R and R1 are same or diff. H, CH3 or C2H5; r,s, and t are 1-20) and 1-6 wt. % on (II) of a polyepoxide (IV) with >=2 epoxy gps., m.pt. <150 degrees C and mol. wt. <3000. Used for making tyre cord. Treatment in (B) improves adhesion to rubber.
